

## Three New Patent Applications Filed

On November 3, 2020, Tribal Rides filed its third patent application to formalize the three provisional patent applications. The Nov. 3 filing details the multiple inventions described in the Nov. 2019 filings.

"We are very pleased with the finalization and filing of these provisional patents and expect them to be approved. They detail new and innovative Pricing Models, Community-based Scheduling and End-to-End Resource Optimization for cars we are driving today as well as for the emergence of self-driving cars. The patents support our planned and continuing development of the Tribal Rides Ecosystem and Marketplace," stated Tribal Rides, Inc., CEO Joseph Grimes.

These filings add to the **Tribal Rides patent portfolio** that includes "**METHOD AND SYSTEM FOR ANTICIPATORY DEPLOYMENT OF AUTONOMOUSLY CONTROLLED VEHICLES**" (U.S. Patent 9,984,574 filed in 2014), and a divisional application filed to protect additional inventions in the 2014 filing.

Mr. Grimes continues, "We are also continuing our negotiations for the acquisition of five (5) additional Mapping Patents that we believe will enhance our mapping capabilities."

Please stay safe and healthy and visit Tribal Rides website for additional details!
